

# Bug Hotel

---

Did you know that by building a bug hotel in your garden or balcony you can encourage biodiversity by attracting various insects and giving them a place to live?

A bug hotel can also reduce the need for pesticides because insects help you naturally.

Let's build it together!

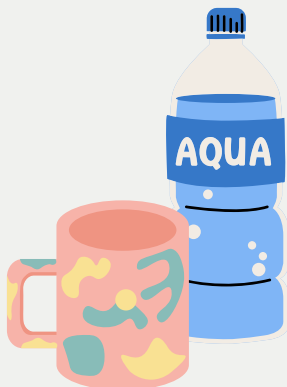

---

## WHAT WE NEED:

- Empty bottles or jars
- Old cups
- Old newspapers
- Finished rolls of toilet paper
- Dried leaves
- Wood shavings
- Potting soil
- Hollow bamboo canes

## STEP 1

We choose a roomy container that will become our beautiful bug hotel.

## STEP 2

We stack the various materials inside the container, placing the heaviest ones at the bottom and giving them different shapes and sizes; slits of various shapes and sizes will attract different types of insects intact.

## STEP 3

We place our hotel in a quiet, dry and easy-to-reach spot for our insect friends.
